*for the love of raw*

**FUN FACTS**  
DID YOU  
**KNOW?**

## CANINE SPECIES

There are 36 canine species of which ONE is the dog (of which there are lots of different breeds). The dog is the only species subjected to a commercial diet.

## DOMESTICATED DOG

The domesticated dog has evolved by only 1% - which means they are still very much equipped and able to eat a species appropriate diet.

## pH IN DOGS

Stomach pH in dogs is 1-2 which is acidic enough to dissolve bones and kill bacteria.

**pH  
Balance**

## SALIVARY

Canine salivary enzymes are specifically designed to kill bacteria instead of breakdown of food in the mouth (like in humans).

## RAW FEEDING

You have tried the rest, and nothing has worked now try RAW FEEDING.

Biological Appropriate Raw Feeding - as mother nature intended. See the difference in just 30 days. You have nothing too loose, but so much to gain. Just come and chat to us.
