# Making The Transformation

*We recommend a 6-day feeding schedule with a day of fasting on the 7th . Fasting is an age-old practice and has been known to aid digestion and help cleanse the body of toxins. It is not un-common for animals in the wild to fast.*

## Rapid Switch

If your pet has a strong immune system and is generally quite healthy, an immediate conversion can be done. On the first day fast your pet for 24 hours to allow the body to cleanse itself of toxins and to make your pet eager for their next day's meal.

## Slow Switch

This method is strongly recommended for pets with compromised immune systems or sensitivity to dramatic changes in diets. The raw diet should be introduced slowly to prevent major detoxification symptoms.
